HUSNI RAMANDA LUBIS

Senior Data Scientist | ML Systems & Decisioning

WhatsApp | Email| LinkedIn | GitHub | Portfolio

SUMMARY

Senior Data Scientist with 7+ years of experience building **credit risk and fraud detection systems** across fintech, banking, insurance, and e-commerce.

Strong track record in developing **production-ready machine learning models**, with experience in feature engineering, model validation, and large-scale decision systems.

Experienced in bridging analytics and engineering through **API-based model integration, backend systems, and data pipelines**, with growing focus on building scalable, production-oriented ML solutions.

CORE SKILLS

Machine Learning & Analytics
Credit Scoring, Fraud Detection, Feature Engineering, Model Validation, Ensemble Models (XGBoost, LightGBM, Logistic Regression, Random Forest, KNN)

Data & Backend Systems
REST API, PostgreSQL (Supabase), Prisma ORM, Redis (Upstash), JWT Authentication, Data Pipelines

Programming
Python, SQL, JavaScript (ES6+), TypeScript (basic)

Tools & Platforms
Google Cloud (Vertex AI), Git, Cloudinary, Data Visualization (Tableau, Power BI, Data Studio)

EXPERIENCE

Chief Executive Officer | PT. Penyangga Pilar Konstruksi| Bogor, Indonesia
Mar 2025 – Present

- Built financial tracking and margin monitoring systems for **multi-billion IDR infrastructure projects**, reducing budget deviation by **~10%**
- Designed automated budgeting and reporting workflows, reducing manual effort by **~30%**
- Developed real-time profitability monitoring across **6 projects**, improving margin visibility
- Standardized financial review processes, improving operational efficiency by **~30%**

Data Scientist (ML Systems) | PT. Tongdun Technology Indonesia | Jakarta, Indonesia
Mar 2024 – Mar 2025

- Built credit scoring models for Tier-1 government banks using **external data only**, achieving **~80% AUC**
- Developed fraud detection models for **large-scale systems with high transaction volume**
- Designed feature engineering and validation pipelines for **production ML systems handling hundreds of millions of transactions/month**
- Delivered **6+ PoC projects**, with **~90% conversion to implementation**

- Collaborated with engineering teams to integrate models into **scalable decision systems**

Co-Founder| PT. Penyangga Pilar Konstruksi| Bogor, Indonesia
Dec 2022 – Mar 2024

- Built VBA-based budget dashboard, reducing manual reporting effort by **~30%**
- Developed Python-based pricing tools, improving margin estimation accuracy by **~20%**
- Implemented structured cost monitoring systems for **multi-billion IDR projects**
- Applied quantitative analysis for project profitability and financial risk evaluation
- Managed execution across **5+ projects** under ISO-compliant standards

---

Senior Data Scientist | Tokopedia | Jakarta, Indonesia
Nov 2020 – Dec 2022

- Developed credit scoring models improving **AUC by ~2–4%**
- Built income prediction models for **~124M+ users**
- Deployed ML models using **Google Vertex AI**
- Improved customer segmentation and risk profiling using behavioral + bureau data
- Built portfolio monitoring dashboards for real-time credit tracking
- Contributed to **~30% improvement in approval efficiency** through data-driven strategies

---

Data Scientist | Generali Indonesia | Jakarta, Indonesia
Nov 2018 – Oct 2020

- Enhanced dynamic pricing engine for actuarial modeling
- Built dashboards reducing reporting workload by **~40%**
- Developed API-based pipelines for real-time data integration
- Built simulation models for agent compensation forecasting

Decision Scientist | Bank Ganesha | Jakarta, Indonesia
Sep 2017 – Sep 2018

- Developed credit scoring and segmentation models, improving cross-sell effectiveness by **~40%**
- Built automated reporting pipelines reducing manual workload by **~30%**
- Designed daily data mart pipelines for **5+ stakeholders**
- Led PSAK 71 data migration and preparation
- Built credit scoring models with **~80% AUC**

PROJECTS

EventHub – Event Management Platform

Full-stack system with structured backend architecture

- Built REST API using **PostgreSQL (Supabase) + Prisma ORM**
- Implemented **Redis caching (Upstash)** to optimize performance
- Integrated **JWT authentication** and Cloudinary for media handling
- Designed end-to-end event discovery and management system

Spoken Language Identification (CNN)

Deep learning pipeline for audio classification

- Extracted MFCC, chroma, and spectrogram features
- Built CNN model for language classification
- Applied signal processing + deep learning workflow

AI Content Creator Platform (In Progress)

- Developing system for **automated content research and insight generation**
- Using LLM-based pipelines for topics, hooks, and structured outputs
- Designing modular backend for scalable content processing

CERTIFICATIONS

- **HackerRank SQL Intermediate**
- **Clean Code Python (Udemy)**
- **Mathematics for Machine Learning — Imperial College London**
- **Getting and Cleaning Data — Johns Hopkins University**
